

FOR IMMEDIATE RELEASE

To: The Broadcast Press
From: Willie D. Davis, President, All-Pro Broadcasting, Inc.
Date: Thursday, 20 May 2010
Subject: FCC Filing Seeking Relief From IBOC Interference

Today, All-Pro Broadcasting, Inc., (*All Pro*), the licensee of Station KATY-FM, 101.3 MHz, Idyllwild, California, is filing a Petition with the FCC seeking relief from ongoing and destructive interference caused by the hybrid Digital operations of Station KRTH, 101.1 MHz, Los Angeles, California. An accompanying engineering analysis demonstrates that the interference is adversely affecting reception of Station KATY-FM over a substantial portion of the area within KATY-FM's 60-dB μ signal contour.

The analysis is partly based on measurements of the KRTH Upper Digital Sideband made in accordance with FCC rules.

All Pro is also supplying the FCC with a Compact Disc containing recordings of actual interference experienced by a factory-equipped car radio. The recordings were made while the vehicle was driven along several heavily travelled Southern California roads within Station KATY-FM's 60-dB μ contour.

To ensure that Station KATY-FM receives the protection to which it is entitled under the Communications Act, All Pro's Petition urges the FCC staff to order CBS Radio East, Inc., the licensee of Station KRTH:

- to reduce KRTH's Digital signal power; and
- to cooperate with All Pro so that the parties can promptly resolve the problem.

All Pro has previously and unsuccessfully tried to get CBS to address the matter. In light of CBS's inaction, All Pro concluded that it had no choice but to seek redress at the FCC.

Copies of the Petition and interference recordings are available upon request.
